COLLATION PROJECT

Considerable progress was achieved during Fiscal Year 1964 on the joint CIA-Army Map Service intelligence map project, an all-source program for locating, identifying, and evaluating important intelligence targets in the USSR and collating them on an area basis. More than 30 percent of the USSR has now been covered by published maps at a scale of 1:250,000 (total sheets -- 625). Intelligence research has been completed on maps covering an additional 17 percent of the USSR. Sheets for which research was completed during FY 1964 total 257. Plans have been firmed up to broaden the dissemination of the maps to additional intelligence and military components whose activities are now handicapped by the lack of accurate, up-to-date maps on the USSR.
